

LEDGER-Q

Ten simple steps: working proof se responsible real use tak

Rahul Dewangan | PRAMANEX | 6 October 2026

Yeh list batati hai ki kya check karna hai, main kya kar sakta hoon, aur kahan aap ya qualified professional ki zaroorat hai. Har box ko automatically complete mat samjho. Synthetic test, actual AI call aur real professional validation teen alag proofs hain.

Current scope: controlled functional MVP. Fresh private workspace, separate saved synthetic proof, original evidence, quality/HOLD controls, bounded AI support, exact-revision human review, history and controlled evidence packet implemented. Real regulated customer readiness remains pending.

1. Apna khaali kaam aur example alag rakho
2. Mool document aur exact version se shuru karo
3. Gayaab ya uljha hua proof clearly dikhao
4. Investigation aur corrective action ko proof ke saath rakho
5. Source badle to linked kaam dobara review ho
6. Expected answer ke saamne observed result check karo
7. Live AI ko permission aur cost limits ke saath chalao
8. Saved work, access, review aur export ko connected rakho
9. Time aur corrections ko sach mein measure karo
10. Galti, shutdown aur recovery ka safe result check karo

How to mark: Tested locally / Checked on hosted synthetic case / Still requires real professional evidence. Keep the supporting receipt and date with each answer.

STEP 01 - Apna khaali kaam aur example alag rakho

Seedha matlab

Naya account kholne par apne dashboard mein koi example apne aap nahi aana chahiye. Zero ka matlab sach mein zero saved evidence hai. Working proof alag read-only original hai. Use apne workspace mein lena ho to pehle alag khaali copy aur clear confirmation chahiye.

Main kya karunga; aap kya karoge

Main fresh entry, saved workspace list, proof selection aur data na badalne ke tests kar sakta hoon. Aap bina company data dale sign-in se empty dashboard aur Working proof button dono dekh sakte ho.

Kahan se aur kaise shuru karen

Sign-in -> zero dashboard -> Working proof -> Inspect original. Private copy chahiye to fresh workspace banao, phir confirm karo.

Abhi ka evidence aur limit

55-check integration group mein fresh entry, proof import aur isolation ke checks; v5 hosted entry readback alag receipt hai. Yeh tests real professional qualification nahi hain.

Kab complete maana jayega

Naye workspace ki ginti zero ho, selected proof ke hi records dikhain, purane private records replace na hon.

Kis stage mein chahiye

Portfolio: zaroori. Paying users: real accounts aur separation bhi check karna.

[] Check kiya [] Supporting result saved [] Remaining gap recorded

STEP 02 - Mool document aur exact version se shuru karo

Seedha matlab

Jo document istemal hua, uska naam, original bytes, version aur permission saath rahen. Kisi summary ko original ka replacement mat samjho. Text se nikla requirement exact source passage ke saath dikhe.

Main kya karunga; aap kya karoge

Main authorized synthetic TXT, PDF ya image upload aur original readback check kar sakta hoon. PDF ka automatic text/table reading abhi complete built-in service nahi; user-confirmed text ko original file se compare karna padega.

Kahan se aur kaise shuru karein

Synthetic SOP-QC-014 v3 aur laboratory original kholo. Real document ho to owner ki permission lo, unnecessary personal details hatao, original aur checked transcription upload karo.

Abhi ka evidence aur limit

Local integration checks cover original storage, checksum, exact text links and revisions. Structured live AI connectivity is separate from PDF or vision qualification.

Kab complete maana jayega

Source khule, version visible ho aur derived statement ko exact original passage tak wapas le ja saken.

Kis stage mein chahiye

Portfolio: labelled synthetic sources chalegi. Paying users: authorized representative files aur supported format limits zaroori.

[] Check kiya [] Supporting result saved [] Remaining gap recorded

STEP 03 - Gayaab ya uljha hua proof clearly dikhao

Seedha matlab

Agar do records ek hi result ke liye alag number dein, unmein se ek ko khud se sahi mat chuno. Missing proof par HOLD ya UNKNOWN rehna chahiye.

Main kya karunga; aap kya karoge

Main conflicting-number, wrong-unit, stale-source aur missing-critical-field examples chala kar checks fix kar sakta hoon. Asli scientific conclusion qualified reviewer dega.

Kahan se aur kaise shuru karein

Drug Q case mein 94.2% original aur 99.1% transcription dekho. Approved repeat-test rationale missing hai. Koi invented result add mat karo.

Abhi ka evidence aur limit

Saved synthetic quality event stays HOLD, root cause UNKNOWN and disposition undecided. Local adverse checks test the block.

Kab complete maana jayega

Conflict visible rahe, missing rationale listed ho aur unsupported result approve ya close na ho.

Kis stage mein chahiye

Dono stages mein zaroori.

☐ Check kiya ☐ Supporting result saved ☐ Remaining gap recorded

STEP 04 - Investigation aur corrective action ko proof ke saath rakho

Seedha matlab

Cause, severity, confidence, action owner, due date, training aur closure ko alag samjho. Ek action likhne ka matlab action complete hona nahi. Closure ko implementation aur effectiveness proof chahiye.

Main kya karunga; aap kya karoge

Main saved investigation, CAPA, training links, deadlines aur closure blocks test kar sakta hoon. Main real root cause ya action effectiveness invent nahi kar sakta.

Kahan se aur kaise shuru karein

Synthetic CAPA-026 kholo. Cause aur effect evidence absent rakho aur closure try karo. Real use mein investigator original laboratory records, procedure aur action proof provide kare.

Abhi ka evidence aur limit

Integration suite covers missing implementation/effectiveness gates and signed review controls. No real batch disposition established.

Kab complete maana jayega

Missing proof se closure blocked ho. Human-established cause aur evidence mile tab named reviewer exact record decide kare.

Kis stage mein chahiye

Portfolio mein controlled failure dikhao. Paying users ke liye qualified QA process owner zaroori.

☐ Check kiya ☐ Supporting result saved ☐ Remaining gap recorded

STEP 05 - Source badle to linked kaam dobara review ho

Seedha matlab

Purana approval badle hue source ko approve nahi kar sakta. Source -> quality event -> CAPA/training/AI use links se affected work stale ya review-required hona chahiye.

Main kya karunga; aap kya karoge

Main transitive links, revision invalidation aur history preservation test/fix kar sakta hoon. Aap real review owner aur approved checking responsibilities set karoge.

Kahan se aur kaise shuru karein

Synthetic original ka naya version save karo; Changes view mein dekho kaunsa record dobara khulta hai. Purana decision history mein rahe, current approval na ban jaye.

Abhi ka evidence aur limit

Local suite covers dependency invalidation and old-snapshot reconstruction. Public read-only proof is not mutated by this demonstration.

Kab complete maana jayega

Affected downstream work requires fresh evidence review; unrelated work remains intact; old history reconstructable rahe.

Kis stage mein chahiye

Dono stages mein zaroori.

[] Check kiya [] Supporting result saved [] Remaining gap recorded

STEP 06 - Expected answer ke saamne observed result check karo

Seedha matlab

Test se pehle likho ki result kya aana chahiye. Phir saved result compare karo. Sirf successful example se reliability prove nahi hoti; failures bhi visible hon.

Main kya karunga; aap kya karoge

Main synthetic expected-answer set, scoring, held-out file structure aur failure report bana sakta hoon. Qualified QA/RA/CMC reviewer real expected answers approve karega.

Kahan se aur kaise shuru karen

Portfolio mein known conflict, missing value, wrong unit, stale version aur unsupported statement use karo. Real pilot mein expert alag unseen records ke expected findings mark kare.

Abhi ka evidence aur limit

55 synthetic integration and 9 server-rendered presentation checks are separate engineering groups. Gemini hosted receipts demonstrate actual calls, not professional accuracy.

Kab complete maana jayega

Defined test cases pass or clearly fail, unsupported answers rejected, denominators and scope preserved. Real-world quality tabhi proven jab unseen authorized data aur expert answers pass hon.

Kis stage mein chahiye

Portfolio: documented synthetic cases. Paying users: qualified answers and independent unseen cases mandatory.

[] Check kiya [] Supporting result saved [] Remaining gap recorded

STEP 07 - Live AI ko permission aur cost limits ke saath chalao

Seedha matlab

Key hona sirf calls chalane ka access hai. Selected documents bhejne ki permission, bounded tasks, saved attempts aur separate reviewer response bhi chahiye. AI final human signature nahi dega.

Main kya karunga; aap kya karoge

Main configured Gemini or Groq access par synthetic planner/specialist/reviewer calls aur failure handling test kar sakta hoon. Key chat, source ya ZIP mein kabhi nahi daalunga.

Kahan se aur kaise shuru karein

Workspace Settings mein provider consent aur accessible models select karo. Synthetic case par bounded run start karo. Real documents bhejne se pehle document owner ki explicit permission lo.

Abhi ka evidence aur limit

Actual saved Gemini planner/specialist/reviewer receipt is included separately from mocked local provider tests. Auto model routing verifies distinct reported models.

Kab complete maana jayega

Run saved ho, actual model identities/attempts visible hon, failed calls not successful, candidate cannot approve a record. Cost and workload limits chosen and enforced for intended use.

Kis stage mein chahiye

AI claim karna ho to portfolio mein real call evidence chahiye. Customer use ke liye processing permission and operating limits zaroori.

[] Check kiya [] Supporting result saved [] Remaining gap recorded

STEP 08 - Saved work, access, review aur export ko connected rakho

Seedha matlab

Source, event, decision aur exported packet ek hi saved revision se connected hon. Owner hona automatically qualified reviewer hona nahi. Export evidence packet hai, commercial release nahi.

Main kya karunga; aap kya karoge

Main role enforcement, exact-record signing, history, controlled packet aur stored readback check kar sakta hoon. Reviewer identity aur professional responsibility aap arrange karoge.

Kahan se aur kaise shuru karein

Separate owner/read-only/reviewer test accounts use karo. Wrong role se save/sign try karo. Correct role mein exact record review karo; source badle to old signature current approval na rahe.

Abhi ka evidence aur limit

Local integration checks cover tenant access, denied actions, revision conflicts, signing controls and export boundaries. Hosted fresh/proof entry checks are separate.

Kab complete maana jayega

Unauthorized account read/write na kar sake, review exact revision se tied ho aur missing proof se accepted output na nikle.

Kis stage mein chahiye

Working portfolio mein demonstrate; paying users mein actual hosted account/tenant tests required.

[] Check kiya [] Supporting result saved [] Remaining gap recorded

STEP 09 - Time aur corrections ko sach mein measure karo

Seedha matlab

Synthetic workflow timing ko professional time saving mat bolo. Same allowed task manually aur assisted tareeke se karwao; review time aur corrections bhi total mein jodo.

Main kya karunga; aap kya karoge

Main measurement worksheet aur event instrumentation de sakta hoon; synthetic timings ko clearly engineering test label karunga. Actual users ka manual time, judgement aur feedback unhi se aayega.

Kahan se aur kaise shuru karein

Qualified user same case manually kare. Time, missed facts, corrections aur review effort record karo. Phir matched task LEDGER-Q ke saath kare. Aap participants aur permission arrange karo.

Abhi ka evidence aur limit

No actual professional baseline, supervised pilot or percentage benefit has been established. No 50% or 70% improvement claimed.

Kab complete maana jayega

Comparable real tasks, reviewer-approved quality checks and documented limitations support any benefit claim. Without that, keep benefits unmeasured.

Kis stage mein chahiye

Portfolio mein benefit claim na ho to baad mein. Paying users ke pilot mein measurement zaroori.

☐ Check kiya ☐ Supporting result saved ☐ Remaining gap recorded

STEP 10 - Galti, shutdown aur recovery ka safe result check karo

Seedha matlab

Network fail, provider timeout, duplicate click, wrong file, wrong role ya service restart ho to saved work missing success na ban jaye. Backup file hona restore proof nahi.

Main kya karunga; aap kya karoge

Main local adverse tests, bounded retries, duplicate prevention, checksum verification and copy-restore checks kar sakta hoon. Real hosting load, external alert delivery and disaster-recovery drill need service operator access and limits.

Kahan se aur kaise shuru karein

Synthetic workspace export/backup lo, verified copy restore karo, originals compare karo. Operator approved test environment mein expected users/file sizes aur downtime recovery test kare.

Abhi ka evidence aur limit

Basic local security/recovery tests pass within bounded storage. Current aggregate limit: 1,500 records / 1.8 MB state; backup original bytes 2 MB / packet 4 MB. Global scale and production disaster recovery not proven.

Kab complete maana jayega

Failure visible, original preserved, duplicate writes prevented, tested restore reconstructs permitted evidence; current review permissions re-established safely.

Kis stage mein chahiye

Portfolio: basic checks. Paying regulated users: production security, load, monitoring and recovery evidence mandatory.

[] Check kiya [] Supporting result saved [] Remaining gap recorded

Paid users se pehle: five shared essentials

Service ka clear promise

Supported file formats, record limits, what the product helps with, what it cannot decide, pricing and usage limits explain karo. Human approval kab needed hai clear rakho.

Billing aur cancellation

Actual invoice/payment, renewal and cancellation process chahiye. Manual billing chalegi; fake checkout nahi.

Privacy aur deletion

Document owner ki processing permission, provider usage disclosure, retention and verified deletion procedure chahiye. UI policy field ko executed deletion service mat samjho.

Help aur incident response

Working support contact, onboarding, error escalation and responsible operator chahiye. Alert visible hona email delivered hone ka proof nahi.

Expected workload check

Expected concurrent users, file sizes, latency and cost limits approve karo; actual service ko us workload par test karo. Synthetic fast test global scale prove nahi karta.

Optional for this stage

Extra autonomous agents, Google login when secure email entry is working, decorative effects, unused integrations and heavy global-scale features are optional. Basic security, permission, HOLD and recovery checks are not optional for paid regulated use.

Final decision

Main engineering, synthetic tests, provider connectivity aur evidence report bana sakta hoon. Aap access, permission, budget aur users arrange karoge. Qualified professionals actual correctness, root cause, disposition aur production-use acceptance decide karenge. Zero-error or regulatory-validation guarantee nahi di gayi hai.
